Universal Secure Registry offers mobile wallet

Universal Secure Registry, a US mobile payment security technology enabler and identity authentication company has released its electronic wallet available for mobile phone users.

The USR electronic wallet patented technology is currently available to third parties, including credit card companies, wireless carriers, banks, retailers and others for licensing. Moreover, the USR electronic wallet is expected to work as a mobile transaction technology that does not transmit sensitive information from or stores exploitable information in the mobile device.

In addition, Universal Secure Registry has implemented its patented 3+ Factor Security system in the newly-launched e-wallet.
